### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

Claims 1-8 are allowable over the prior art of record because the prior art of record does not teach the claimed subject matter including helically winding the substrate around a stationary cooling block of non-circular cross section such that the substrate traverses the at least one deposition zone multiple times wherein multiple layers of a coating are applied to the substrate and for a total period of time sufficient to deposit a coating of the desired thickness onto the substrate.

Claims 9-15 are allowable over the prior art of record because the prior art of record does not teach the claimed subject matter including helically winding the substrate around a stationary cooling block of non-circular cross section in the first deposition chamber such that the substrate traverses the at least one deposition zone multiple times wherein multiple layers of a coating are applied to the substrate and for a total period of time sufficient to deposit a coating of the desired thickness onto the substrate.

Claims 16 and 17 are allowable over the prior art of record because the prior art of record does not teach the claimed subject matter including wrapping the substrate exiting the deposition zone helically around a stationary cooling block of non-circular cross section such that the substrate traverses the deposition zone multiple times allowing the vaporized coating material to impinge upon the surface of the substrate for a period of time sufficient to deposit a coating onto the substrate.

Claims 18-31 are allowable over the prior art of record because the prior art of record does not teach the claimed subject matter including wrapping the substrate exiting the deposition zone helically around a stationary cooling block of non-circular cross section such that the substrate traverses the deposition zone multiple times allowing the vaporized coating material to impinge upon the surface of the substrate for a period of time sufficient to deposit a coating onto the substrate.

Claim 32 is allowable over the prior art of record because the prior art of record does not teach the claimed subject matter including feeding the substrate through an vacuum deposition chamber wherein a layer of a coating is applied to the substrate in a deposition zone and the coating is modified by treatment in a coating modification zone where the substrate is helically wound around a stationary cooling block of non-circular cross section and the deposition zone and coating modification zone are located on opposite sides of the cooling block.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
